DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 17, 21, 24 and 29 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 113283.

There is disclosed in the Japanese reference a magnetic treating device comprising: two semi-cylindrical halves 2, each of the halves having a fastening end and a grasping end 4, wherein the grasping end extends from the fastening end and is constructed and arranged for opening and closing the fastening end; a spring mechanism (see translation) connecting the halves; and a plurality of magnets 3 in the halves.

In regards to claims 17 and 29, use of the device on the neck of a beverage bottle is intended use and provides no structural limitations. Additionally, it is evident that the device could be fastened to a bottle neck having the appropriate size.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/621,563

Art Unit: 1761

Claims 2, 23 and 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 113283 in view of Burns.

Burns discloses the use of a cushioning layer 24, 26 on an inner surface of a magnetic treating device.

It would have been obvious to one skilled in the art to provide the device of JP 113283 with the cushioning layer taught in Burns, in order to prevent damage to the item upon which the device is fastened.

Claims 3-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 113283 in view of JP 102859.

JP 102859 discloses a magnetic treating device having tabs (connecting arms) 31, 32 attached to opposed halves, each tab having an aperture at a free end thereof for receiving a connecting member.

It would have been obvious to one skilled in the art to provide the device of JP 113283 with the connecting tabs disclosed in JP 102859, in order to allow for the device to open about a larger area.

In regards to the specifics of the spring element recited in claim 7, it is inherently taught that the spring mechanism in JP 113283 has those features.

Claims 15, 22 and 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 113283.

In regards to the type of magnet, such would be an obvious matter of design choice, since applicant has failed to disclose that the use of a neodymium iron boron

Art Unit: 1761

magnet solves any stated problem or is for any particular purpose and it appears that the invention would perform equally well with the magnets disclosed in JP 113283.

Allowable Subject Matter

Claims 8-14, 16, 18-20, 25 and 27 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Reginald L. Alexander whose telephone number is 571-272-1395. The examiner can normally be reached on Monday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Milton Cano can be reached on 571-272-1398. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
